Gontinuation of 2. NOTE: The amendment of claim 1 which requires that the microparticles are "capable of causing light scattering at wavelengths suitable for the detection of agglutinated microparticles" raises new issues of consideration under the provisions of 35 USC 112, second paragraph. Specifically, claim 1 fails to provide a positive limitation in the claim in reciting, "capable of". Further, the recitation of "said microparticles" lacks clear antecedent support. Also, the recitation of "the detection of agglutinated microparticles" lacks clear antecedent support since there is no prior provision that the two separate populations of microparticles are caused to agglutinate; only that they each have a mean diameter and refractive index, and that each are suitable for enhanced light scattering assays. It is, therefore, unclear how the "detection of agglutinated microparticles" relate to the two populations, i.e. first and second, of microparticles so as to be used in an agglutination assay to determine an amount of analyte in the sample, as required by the preamble.

Continuation of 5. does NOT place the application in condition for allowance because: the amendment of claim 1 fails to obviate the teaching and/or suggestion of the prior art of record. Further, the amendment of claim 1 raises new issues of consideration under the provisions of 35 USC 112, second paragraph.
